### Foreword

This report, *Wisconsin Deaths, 2004,* presents key information about deaths of Wisconsin residents that occurred in 2004 and previous years. Information is included on the number and rate of deaths overall and by age, sex and cause. *Wisconsin Deaths* has been published annually since the 1995 data year, and replaced the earlier report series *Vital Statistics* (data years 1984-1994), *Public Health Statistics* (1952-1983), and *Annual Report of Morbidity and Mortality* (1948-1951).

The source of data for this report is death certificates filed with the State Registrar, Vital Records Section, Bureau of Health Information and Policy (BHIP), Division of Public Health, Department of Health and Family Services.

The Bureau of Health Information and Policy would like to recognize the following: local Register of Deeds offices and the Milwaukee and West Allis city health offices (for registering deaths), coroners and medical examiners (for certifying causes of death), hospitals and physicians (for certifying deaths), and funeral directors (for filing death certificates). We would also like to acknowledge and thank other states and countries for submitting data on deaths of Wisconsin residents that occurred in those places.

The Department of Health and Family Services produced this publication. Staff of the Vital Records Registration and Statistics Unit, Bureau of Health Information and Policy, collected and compiled the death records. Joyce Knapton prepared the report and wrote the narrative. Patricia Nametz edited the report. Draft review and comments were provided by Patricia Guhleman and Wen-Jan Tuan in the Bureau of Health Information and Policy. The report was prepared under the supervision of Jane Kraus, Supervisor, Registration and Statistics Unit, and John Kiesow, State Registrar, Vital Records Section; and the overall direction of Susan Wood, Director, Bureau of Health Information and Policy.

Death, birth, hospitalization and other health-related statistical information for Wisconsin is also available through the Internet on the Department of Health and Family Services Web site, at http://dhfs.wisconsin.gov/stats.

Comments, suggestions and requests for additional data may be addressed to:

### Introduction

All tables and figures in this report present Wisconsin resident data (deaths of Wisconsin residents). This means that deaths have been assigned to the area where the person lived (usually legal residence), regardless of where the death occurred. Most of the deaths reported in this publication occurred in Wisconsin, although the Bureau of Health Information and Policy receives death certificates of Wisconsin residents from other states and countries as well. (Reports of deaths that occurred outside Wisconsin are thought to be substantially complete.)

Chapter 69, Wisconsin Statutes, authorizes the Department of Health and Family Services to supervise and direct the collection of vital statistics death data. This statute also indicates how local registrars are to collect and file certificates for deaths that occur in their jurisdictions.

Beginning with 1999 data, causes of death have been coded using the International Classification of Diseases, Tenth Revision (ICD-10). ICD-10 replaces the ICD-9 that was used to code death data for the years 1979-1998. ICD-10 is a classification system that was developed collaboratively by the World Health Organization (WHO) and 10 international centers to reflect advances in medical science and changes in diagnostic terminology, and to promote international comparability in the presentation of mortality statistics.

A comparability table has been prepared to assist the reader in comparing numbers of deaths by cause between 1999 (and subsequent years) and the years before 1999. The table is available through the Internet on the Department of Health and Family Services Web site at: http://dhfs.wisconsin.gov/deaths.

## **Key Findings**

- In 2004, there were 45,488 deaths of Wisconsin residents, 552 fewer than in 2003.
- In 2004, the Wisconsin death rate (deaths per 1,000 population) was 8.2, the lowest rate ever reported for the state.
- The Wisconsin death rate has been similar to the United States death rate every year since 1945.
- Age-specific death rates for males generally exceed death rates for females. However, among persons aged 80 and older, the number of female deaths is greater than the number of male deaths (even though male death rates remain generally higher). This is because many more females than males live past the age of 80.
- As a percent of total deaths, cremations increased by 14 percentage points over the past decade (from 19 percent to 33 percent). Burials decreased (from 71 percent to 58 percent).
- In 2004, an autopsy was performed in just 8 percent of deaths, compared with 14 percent in 1980.
- The percentage of deaths with an autopsy decreased in most age groups from 1980 to 2004.
- In 2004, a total of 72 deaths were reported on death certificates as due to injuries at work. This was fewer than the number reported for 2003 (76).
- As in 2003, the three leading underlying causes of death in 2004 were diseases of the heart, malignant neoplasms (cancer) and cerebrovascular diseases (stroke). These three causes of death accounted for 57 percent of total deaths among Wisconsin residents.
- Accidents were the leading underlying cause of death among males ages 1-14, 15-24 and 25-44.
- Accidents were the leading underlying cause of death among females ages 1-14 and 15-24. Cancer was the leading cause of death among women ages 25-74.
- Diseases of the heart and cancer were the two leading underlying causes of death in each race group. In 2004, diseases of the heart accounted for 21 percent of deaths among African Americans, 27 percent of deaths among whites, 17 percent of deaths among American Indians and 20 percent of deaths among Asians. Cancer accounted for 22 percent of deaths among African Americans, 24 percent of deaths among whites, 22 percent of deaths among American Indians and 20 percent of deaths among Asians.
- Accidents were the third leading cause of death among males of all ages. They accounted for 12 percent of deaths among American Indian males, 12 percent of deaths among Asian males, 6 percent of deaths among white males, and 8 percent of deaths among African American males.
- Among females in every race group except Asians, diseases of the heart and malignant neoplasms (cancer) were the two leading underlying causes of death in 2004. Malignant neoplasms and cerebrovascular diseases were the two leading causes of death among Asian women in 2004.
- Nineteen percent of Hispanic deaths were due to malignant neoplasms (cancer), compared to 24 percent of deaths among non-Hispanics.

 Deaths and Death Rates by Age and Sex, Wisconsin 2004

Notes: Rates by age and sex are deaths per 100,000 population in that age group or age/sex group.

- Age-specific death rates generally increase with age, except that the death rate for infants (under age one) is higher than that for children in other age groups.
- Age-specific death rates for males generally exceed death rates for females. However, among persons aged 80 and older, the number of female deaths is greater than the number of male deaths (even though male death rates remain generally higher). This is because many more females than males live past the age of 80.

Notes: Population numbers may not sum to total due to rounding. Rates shown here are deaths per 100,000 population. For a map of the Department of Health and Family Services Regions, see Technical Notes, page 82. Effective with 2003 data, Vernon County is now included in the Southern Region instead of the Western Region.

• In 2004, death rates ranged from a low of 765.9 per 100,000 population in the Department of Health and Family Services' Southern region to a high of 884.0 in the Northern region. Differences in the death rate by region reflect many factors, including the region's population age structure.

Table 6. Deaths by County of Residence and County of Occurrence, Wisconsin 2004

Source: Bureau of Health Information and Policy, Division of Public Health, Department of Health and Family Services.

Note: The "residence" column indicates the number of deaths among residents of the county, regardless of where the person died. The "occurrence" column indicates the number of deaths that occurred in that county, regardless of where the person resided. Statewide totals for the two columns differ because some Wisconsin resident deaths occur outside the state, and some deaths of non-residents occur within the state.

#### Table 7. Deaths by Disposition of Body, Wisconsin 1995-2004

Source: Bureau of Health Information and Policy, Division of Public Health, Department of Health and Family Services.

Notes: Percents may not add to 100 due to rounding.

"Donation" means the body was donated for use in medical research and/or education.

"Entombment" means the casket is placed in an above-ground structure, such as a mausoleum.

The high number of "unknowns" is due to reporting of Wisconsin resident deaths occurring in other states. Some states do not consistently report disposition of the body.

• As a percent of total deaths, cremations increased by 14 percentage points over the past decade (from 19 percent to 33 percent). Burials decreased (from 71 percent to 58 percent).

Table 8. Autopsies Performed by Age of Decedent, Wisconsin, Selected Years, 1980–2004

Source: Bureau of Health Information and Policy, Division of Public Health, Department of Health and Family Services. Notes: There were two deaths in 1980 and one death in 2000 for which age was unknown. These deaths are included in the total.

- In 2004, an autopsy was performed in just 8 percent of deaths, compared with 14 percent in 1980.
- The percentage of deaths with an autopsy decreased in most age groups from 1980 to 2004.

#### Table 9. Deaths by Injury at Work by Age, Sex, Race and Hispanic Origin, Wisconsin, 2004

Source: Bureau of Health Information and Policy, Division of Public Health, Department of Health and Family Services. Notes: Race categories may also include people of Hispanic origin; people of Hispanic origin may be of any race. This table indicates the number of death certificates that specified that an injury at work contributed to the death, either as the underlying cause or as a contributing factor.

• In 2004, a total of 72 deaths were reported on death certificates as due to injuries at work.

• Ninety-two percent of deaths due to injuries at work were to white non-Hispanic males.

#### Map 1. Number of Infant Deaths By County of Residence, Wisconsin 2004

- Source: Bureau of Health Information and Policy, Division of Public Health, Department of Health and Family Services.
- Note: Infant deaths are those that occur before one year of age.
  - Milwaukee County accounted for 35 percent of all infant deaths statewide in 2004 (and 21 percent of all births).

#### Table 10. Summary Categories of Cause of Death, Wisconsin 2004

Source: Bureau of Health Information and Policy, Division of Public Health, Department of Health and Family Services.

Notes: The immediate cause of death is the final disease or condition resulting in death. The underlying cause of death is the disease or injury that initiated events resulting in death. All-mention cause of death includes all conditions listed on the death record, including those in the chain of events leading to death and others contributing to the death. Thus, the all-mention cause of death column will always have a higher total than the total number of deaths.

For the ICD-10 codes used for each cause, see Technical Notes, page 81.

• The underlying cause is often referred to as the "cause of death." For example, for 10,838 Wisconsin residents who died in 2004, a malignant neoplasm was listed as the underlying cause on the death certificate. For only 9,079 residents, a malignant neoplasm was indicated as the final disease or condition that caused the person to die (immediate cause). For 11,948 residents, a malignant neoplasm contributed to death (all-mention cause).

#### Table 11. Leading Underlying Causes of Death by Age, Wisconsin 2003 and 2004

Source: Bureau of Health Information and Policy, Division of Public Health, Department of Health and Family Services. For the population estimates used to calculate 2003 rates, see Technical Notes, page 85. For the population estimates used to calculate 2004 rates, see Technical Notes, page 84.

Notes: Age-specific rates are deaths per 100,000 population in that age group. A rate is not calculated when there were fewer than 20 deaths. Underlying cause of death is the disease or injury that initiated events resulting in death.
The total for 2003 includes one record for which sex was unknown.
For the ICD-10 codes used for the cause-of-death groupings, see Technical Notes, page 78 and page 79 (infants only).

Conditions abbreviated in this table are spelled out in full in the Technical Notes.

- As in 2003, the three leading underlying causes of death in 2004 were diseases of the heart, malignant neoplasms (cancer) and cerebrovascular diseases (stroke). These three causes of death accounted for 57 percent of total deaths among Wisconsin residents.
- Although diseases of the heart constituted the leading cause of death overall, within specific age groups this category was the leading underlying cause only among persons 75-84 years and 85 years and over.
- Accidents were the leading cause of death for age groups 1-14, 15-24, and 25-44.

- Source: Bureau of Health Information and Policy, Division of Public Health, Department of Health and Family Services. For the population estimates used to calculate 2003 rates, see Technical Notes, page 85. For the population estimates used to calculate 2004 rates, see the Technical Notes, page 84.
- Notes: Age-specific rates are deaths per 100,000 males in that age group. A rate is not calculated when there were fewer than 20 deaths.

Underlying cause of death is the disease or injury that initiated events resulting in death.

For the ICD-10 codes used for the cause-of-death groupings, see Technical Notes, page 78 and page 79 (infants only). Conditions abbreviated in this table are spelled out in full in the Technical Notes.

- Accidents were the leading underlying cause of death among males ages 1-14, 15-24 and 25-44.
- Suicide was the second leading cause of death among males ages 15-24 and 25-44.
- For males aged 45 and older, heart disease and cancer were the two leading causes of death. Cancer was the leading cause for men ages 45-74, and heart disease was the leading cause for men ages 75 and older.

#### Table 13. Leading Underlying Causes of Death for Females by Age, Wisconsin 2003 and 2004

- Source: Bureau of Health Information and Policy, Division of Public Health, Department of Health and Family Services. For the population estimates used to calculate 2003 rates, see Technical Notes, page 85. For the population estimates used to calculate 2004 rates, see the Technical Notes, page 84.
- Notes: Age-specific rates are deaths per 100,000 females in that age group. A rate is not calculated when there were fewer than 20 deaths.

Underlying cause of death is the disease or injury that initiated events resulting in death.

For the ICD-10 codes used for the cause-of-death groupings, see Technical Notes, page 78 and page 79 (infants only). Conditions abbreviated in this table are spelled out in full in the Technical Notes.

- Accidents were the leading underlying cause of death among females ages 1-14 and 15-24.
- Cancer was the leading cause of death among women ages 25-74.
- Diseases of the heart were the leading cause of death among the oldest groups of women (ages 75-84 and 85 and older).

Source: Bureau of Health Information and Policy, Division of Public Health, Department of Health and Family Services. For the population data used to calculate rates, see Technical Notes, page 84.

Notes: The age/sex-specific rates are deaths per 100,000 population in that age/sex group. Underlying cause of death is the disease or injury that initiated events resulting in death. For the ICD-10 codes used for cause-of-death groupings, see Technical Notes, page 81. Conditions abbreviated in this table are spelled out in full in the Technical Notes.

#### Table 15. Deaths by Underlying Cause of Death, Race and Sex, Wisconsin 2004

Source: Bureau of Health Information and Policy, Division of Public Health, Department of Health and Family Services.

Notes: Underlying cause of death is the disease or injury that initiated events resulting in death. For ICD-10 codes used, see Technical Notes, page 81. Included in the total of this table are four male deaths and one female death for which race was unknown. The "All Other" category consists of two deaths where race was reported as "Hawaiian."

#### Table 17. Leading Underlying Causes of Death by Race, Wisconsin 2003 and 2004

Source: Bureau of Health Information and Policy, Division of Public Health, Department of Health and Family Services.

- Notes: The 2003 total includes four decedents with race reported as Hawaiian and eight records for which race was unknown. The total in 2004 includes two decedents with race reported as Hawaiian and five records for which race was unknown. Underlying cause of death is the disease or injury that initiated the events resulting in death. For the ICD-10 codes used for cause-of-death groupings, see Technical Notes, page 78. Conditions abbreviated in this table are spelled out in full in the Technical Notes.
  - Diseases of the heart and cancer were the two leading underlying causes of death in each race group. In 2004, diseases of the heart accounted for 21 percent of deaths among African Americans, 27 percent of deaths among whites, 17 percent of deaths among American Indians and 20 percent of deaths among Asians. Cancer accounted for 22 percent of deaths among African Americans, 24 percent of deaths among whites, 22 percent of deaths among American Indians and 20 percent of deaths among Asians.
  - Accidents accounted for 5 percent of total deaths in 2004, 5 percent of deaths among whites, 7 percent of deaths among African Americans, 10 percent of deaths among Asians and 9 percent of deaths among American Indians.
  - Differences in leading causes of death by race reflect differences in population age structure (as well as other factors): compared with the total state population, larger proportions of blacks and other minority groups are children and young adults.

#### Table 18. Leading Underlying Causes of Death for Males by Race, Wisconsin 2003 and 2004

Source: Bureau of Health Information and Policy, Division of Public Health, Department of Health and Family Services.

Notes: In 2003, there were eight records for which race was unknown. There was one record in 2003 for which sex was unknown so the totals for males and females will not add to the totals on page 39. The total in 2003 also includes three records for which race was reported as Hawaiian. The total in 2004 includes 2 decedents with race reported as Hawaiian and 4 decedents whose race was unknown.

Underlying cause of death is the disease or injury that initiated events resulting in death.

For the ICD-10 codes used for cause-of-death groupings, see Technical Notes, page 78.

Conditions abbreviated in this table are spelled out in full in the Technical Notes.

- Diseases of the heart and malignant neoplasms (cancer) were the leading underlying causes of death in 2004 for males of all races in Wisconsin.
- Accidents were the third leading cause of death among males of all races.

#### Table 19. Leading Underlying Causes of Death for Females by Race, Wisconsin 2003 and 2004

Source: Bureau of Health Information and Policy, Division of Public Health, Department of Health and Family Services. Notes: There was one record in 2003 for which sex was unknown, so the totals for males and females will

not add to the totals on page 39. The total for 2003 includes one record for which race was reported as Hawaiian. There was one record in 2004 where race was unknown. This is included in the total.

Underlying cause of death is the disease or injury that initiated events resulting in death. For the ICD-10 codes used for cause of death groupings, see Technical Notes, page 78. Conditions abbreviated in this table are spelled out in full in the Technical Notes.

- Among females in every race group except Asians, diseases of the heart and malignant neoplasms (cancer) were the two leading underlying causes of death in 2004.
- Malignant neoplasms and cerebrovascular diseases were the two leading causes of death among Asian women.

# **Technical Notes**

#### **Reporting Requirements**

As specified in Chapter 69, Wisconsin Statutes, the following is a brief outline of the sequence of events that take place when a death occurs in Wisconsin:

- Within 24 hours after being notified of a death, the filing party (usually a funeral director) must present a certificate of death to the physician or medical examiner responsible for completing and signing the medical certification.
- The medical certifier has six days after pronouncement of death to return the certificate of death back to the filing party.
- Within two days after receipt of the medical certification, the filing party must present the death certificate to the registration district (local Register of Deeds or City Health Office).
- There should be no more than nine calendar days total from date of death until filing at a local office.
- The local Register of Deeds or City Health Office must transmit the death certificate to the State Registrar within ten working days (not including weekends) after its receipt from the filing party.
- State statute allows up to 21 days from the date of death for notification to the State Registrar.

#### International Classification of Disease (ICD-10) Codes

Causes of death for deaths that occurred in 2004 have been coded according to the World Health Organization's *International Classification of Diseases—Tenth Revision* (Geneva, Switzerland, 1992). This classification system is the current standard used by the National Center for Health Statistics. All of the cause-of-death groupings utilized in this report were recommended for state use by the National Center for Health Statistics and the World Health Organization.

Listed below are the ICD-10 codes used for ranking leading causes of death in Tables 11, 12, 13, 17, 18 and 19 (List A). Please note that different groupings are used for ranking leading causes of infant deaths (age less than one year) in Tables 11, 12 and 13 (List B).

#### List A

Salmonella Infections (A01-A02) Shigellosis and Amebiasis (A03, A06) Tuberculosis (A16-A19) Whooping Cough (A37) Scarlet Fever and Erysipelas (A38, A46) Meningococcal Infection (A39) Septicemia (A40-A41) Syphilis (A50-A53) Acute Poliomvelitis (A80) Arthropod-Borne Viral Encephalitis (A83-A84, A85.2) Measles (B05) Viral Hepatitis (B15-B19) Human Immunodeficiency Virus (HIV) Disease (B20-B24) Malaria (B50-B54) Malignant Neoplasms (Cancer) (C00-C97) In Situ Neoplasms, Benign Neoplasms and Neoplasms of Uncertain or Unknown Behavior (D00-D48) Anemias (D50-D64) Diabetes Mellitus (E10-E14) Nutritional Deficiencies (E40-E64) Meningitis (G00, G03) Parkinson's Disease (G20-G21) Alzheimer's Disease (G30) Diseases of the Heart (I00-I09, I11, I13, I20-I51) Primary Hypertension and Hypertensive Renal Disease (I10, I12) Cerebrovascular Diseases (Stroke) (I60-I69) Atherosclerosis (I70) Aortic Aneurysm and Dissection (I71) Influenza and Pneumonia (J10-J18) Acute Bronchitis and Bronchiolitis (J20-J21) Chronic Lower Respiratory Diseases (J40-J47) Pneumoconioses and Chemical Effects (J60-J66, J68) Pneumonitis Due to Solids and Liquids (J69) Peptic Ulcer (K25-K28) Diseases of Appendix (K35-K38) Hernia (K40-K46)

Chronic Liver Disease and Cirrhosis (K70, K73-K74) Cholelithiasis and Other Disorders of Gallbladder (K80-K82) Nephritis, Nephrotic Syndrome and Nephrosis (N00-N07, N17-N19, N25-N27) Infections of Kidney (N10-N12, N13.6, N15.1) Hyperplasia of Prostate (N40) Inflammatory Disease of Female Pelvic Organs (N70-N76) Pregnancy, Childbirth and the Puerperium (O00-O99) Certain Conditions Originating in the Perinatal Period (P00-P96) Congenital Malformations, Deformations and Chromosomal Abnormalities (000-099) Accidents (excluding medical/surgical complications) (V01-X59, Y85-Y86) Intentional Self-Harm (Suicide) (U03, X60-X84, Y87.0) Assault (Homicide) (U01-U02, X85-Y09, Y87.1) Legal Intervention (Y35, Y89.0) Operations of War and Their Sequelae (Y36, Y89.1) Complications of Medical and Surgical Care (Y40-Y84, Y88) All Other (All Other Codes)

#### List B (used for Tables 11, 12 and 13 for infants only)

Diarrhea and Gastroenteritis of Presumed Infectious Origin (A09) Tuberculosis (A16-A19) Tetanus (A33, A35) Diphtheria (A36) Whooping Cough (A37) Meningococcal Infection (A39) Septicemia (A40-A41) Congenital Syphilis (A50) Gonococcal Infection (A54) Acute Poliomyelitis (A80) Varicella (Chickenpox) (B01) Measles (B05) Human Immunodeficiency Virus (HIV) Disease (B20-B24) Mumps (B26) Candidiasis (B37) Malaria (B50-B54) Pneumocystosis (B59) Malignant Neoplasms (C00-C97) In Situ Neoplasms, Benign Neoplasms and Neoplasms of Uncertain or Unknown Behavior (D00-D48) Diseases of the Blood and Blood-Forming Organs and Certain Disorders Involving the Immune Mechanism (D50-D89) Short Stature, Not Elsewhere Classified (E34.3) Nutritional Deficiencies (E40-E64) Cystic Fibrosis (E84) Volume Depletion, Disorders of Fluid, Electrolyte and Acid-Base Balance (E86-E87) Meningitis (G00, G03) Infantile Spinal Muscular Atrophy, Type I (Werdnig-Hoffman) (G12.0) Infantile Cerebral Palsy (G80) Anoxic Brain Damage, Not Elsewhere Classified (G93.1) Diseases of the Ear and Mastoid Process (H60-H93)

Diseases of the Circulatory System (I00-I99) Acute Upper Respiratory Infections (J00-J06) Influenza and Pneumonia (J10-J18) Acute Bronchitis and Acute Bronchiolitis (J20-J21) Bronchitis, Chronic and Unspecified (J40-J42) Asthma (J45-J46) Pneumonitis Due to Solids and Liquids (J69) Gastritis, Duodenitis and Noninfective Enteritis and Colitis (K29, K50-K55) Hernia of Abdominal Cavity and Intestinal Obstruction Without Hernia (K40-K46, K56) Renal Failure and Other Disorders of Kidney (N17-N19, N25, N27) Newborn Affected by Maternal Hypertensive Disorders (P00.0) Newborn Affected by Other Maternal Conditions Which May be Unrelated to Present Pregnancy (P00.1-P00.9) Newborn Affected by Maternal Complications of Pregnancy (P01) Newborn Affected by Complications of Placenta, Cord and Membranes (P02) Newborn Affected by Other Complications of Labor and Delivery (P03) Newborn Affected by Noxious Influences Transmitted Via Placenta or Breast Milk (P04) Slow Fetal Growth and Fetal Malnutrition (P05) Disorders Related to Short Gestation and Low Birth Weight, Not Elsewhere Classified (P07) Disorders Related to Long Gestation and High Birth Weight (P08) Birth Trauma (P10-P15) Intrauterine Hypoxia and Birth Asphyxia (P20-P21) Respiratory Distress of Newborn (P22) Congenital Pneumonia (P23) Neonatal Aspiration Syndromes (P24) Interstitial Emphysema and Related Conditions Originating in the Perinatal Period (P25) Pulmonary Hemorrhage Originating in the Perinatal Period (P26) Chronic Respiratory Disease Originating in the Perinatal Period (P27) Atelectasis (P28.0-P28.1) Bacterial Sepsis of Newborn (P36) Omphalitis of Newborn With or Without Mild Hemorrhage (P38) Neonatal Hemorrhage (P50-P52, P54) Hemorrhagic Disease of Newborn (P53) Hemolytic Disease of Newborn Due to Isoimmunization and Other Perinatal Jaundice (P55-P59) Hematological Disorders (P60-P61) Syndrome of Infant of a Diabetic Mother and Neonatal Diabetes Mellitus (P70.0-P70.2) Necrotizing Enterocolitis of Newborn (P77) Hydrops Fetalis Not Due to Hemolytic Disease (P83.2) Congenital Malformations, Deformations and Chromosomal Abnormalities (Q00-Q99) Sudden Infant Death Syndrome (R95) Accidents (excluding medical/surgical complications) (V01-X59) Assault (Homicide) (U01-U02, X85-Y09) Complications of Medical and Surgical Care (Y40-Y84) All Other (All Other Codes)

Note: New Department of Health and Family Services regions were established in July, 1996 and again in February 2004. Effective with 2003 data, Vernon County was included in the Southern Region instead of the Western Region. Comparisons with regional data in previous publications may therefore be affected.

Note: This table shows current life expectancy at various ages for Wisconsin's total population and for males and females. These life expectancy estimates are based on age-specific death rates that occurred during the three-year period 2001-2003.

For example, the life expectancy at birth in 2001-2003 was 78.8 years. This is the average number of years that babies born in these years would live if throughout their lives they experienced the age-specific death rates experienced in 2001-2003. For boys, life expectancy at birth was 76.2 years. For girls, life expectancy at birth was 81.3 years.
